

Ohmmeter Accessories

Kelvin clips, handspikes and probes

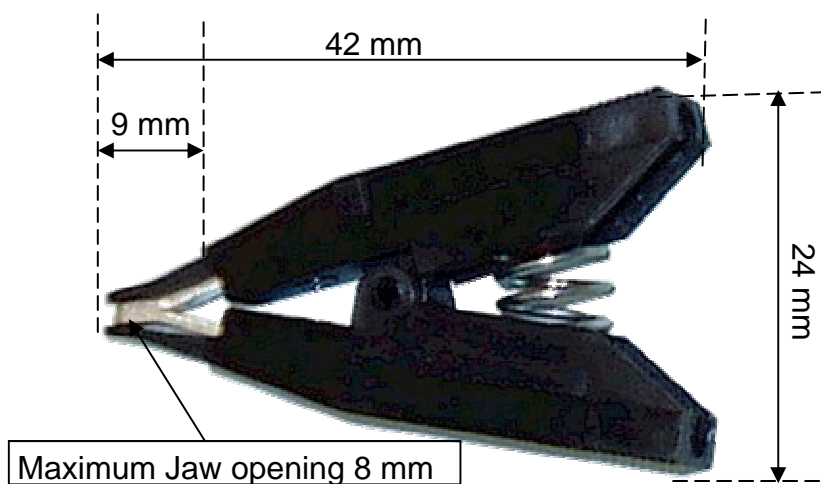

Type KC3

The Kelvin Clip type KC3 is robust in construction, with a strong spring ensuring a firm grip and stable connection is possible on large busbars, cables, bolts and plates etc. The jaws are aluminium with a light diamond serration which avoids slipping. The two jaws are isolated with the current lead connected to one and the potential to the other. The maximum jaw opening is 70 mm and a variety of cable lengths can be attached.

Type KC1

The Kelvin clips type KC1 are constructed from brass and will accept 4 mm banana plugs for lead connection. The maximum jaw opening is 35 mm

Type KC2

The KC2 is a miniature Kelvin clip suitable for the connection of fine wires and conductors. The maximum jaw opening size is 8 mm

Kelvin clips, handspikes and probes

Handspike HS01 consists of two spring loaded and hardened steel probes mounted in a plastic housing. The distance between the spike centres is 10 mm. These handspike make a convenient and easy method of connection to busbars and plates.

Concentric handspike CH01 makes a compact and easy method of making contact when making measurements on awkward and inaccessible connectors. The potential connections is sprung loaded and slides inside the current probe. Both probes have hardened tips.

G Clamp model GC01 is for making connection to large busbars , rails and plates. The maximum jaw opening is 55mm and the clamps can be screwed firmly onto the sample. For 4 terminal measurements it is necessary to use 4 separate clamps.
